Academic Projects

Title	: Predictive Analysis and Vehicle Monitoring System Using CAN Protocol
Platform	: IoT Duration : 1 Month
Description	: Our aim is to provide real-time Vehicle monitoring system. In this project, we are using CAN bus protocol to transfer the sensor data amidst two Cortex-M3 Controllers. This data is sent to Raspberry Pi for down-sampling using InfluxDB. The details are further sent to the cloud for Storage and Visualization on Grafana using RabbitMQ protocol. The user will get notifications regarding predictive maintenance on the Car Dashboard, which is designed using AngularJS.
Title	: Inordinate Voice Based Examination System
Platform	: J2EE Duration : 6 Months
Description	: This project emphasis on automating the process of examination. In this we developed such a system in which anyone interested to check his/her knowledge can answer questions just by speaking and our system will efficiently judge those answers and grade that person accordingly. We will focus on the content the person is delivering and not on the illusion that person is just attempting the questions. Hence more priority will be given to knowledge and the facts.
